

## Summer Student – Geologist in training

### **Job purpose**

#### **“Characterization of the Glauconite reservoir in the East Willesden area of the Deep Basin”**

The Geologist in training will provide Geological support within a multidisciplinary team in a fast paced, well capitalized Junior oil and gas company. This is a 3-4 month position based in the Calgary office and will report to the Director Exploration Team South.

### **Project Description**

To further define the porosity distribution and the delineation of the reservoir geometry. Additional correlation of vertical well data, facies mapping and a review of core and key samples will lead to the understanding of the historical vertical production associated to rock types.

Key tasks will be basic mapping, sequence stratigraphy, mapping and capturing data. Ultimately the goal is to identify the area where horizontal drilling could be conducted and in principle, validating a regional resource play.

### **Qualifications**

- Minimum completion of second, third or fourth year in a Geological program.
- A highly motivated, strong self-starter with excellent communication skills within a team environment.
- Ability to adapt to changing priorities in a fast-paced environment.
- Experience with Microsoft Excel.
- Curious and desire to learn.
